

## Press release

### Defying the pandemic - The first J<sup>2</sup> winder for narrow rolls was successfully put into operation!

In December 2020, Jagenberg Paper GmbH received an order from Zellstoff Pöls AG to replace the old Conwind doctor winder with a modern narrow-cut winder. This winder has now been successfully installed and commissioned after a 12-month delivery period.

The new winder meets the following core customer requirements:

- Two-drum-winder for narrow-cut rolls (max. 19 cuts / min. 70 mm)
- Winding of multipacks
- Time-optimized ramp-down of the machine to eliminate defects (holes)
- Compact design
- One-person operation
- Good operability due to ergonomic design

After the machine was completely assembled at Jagenberg Paper in Krefeld and the main functions were tested in a FAT (Factory Acceptance Test), assembly and subsequent commissioning in Pöls was done at the end of January 2022 by the experts from Jagenberg Paper.

From the quotation phase through processing to installation and commissioning on site, the project was characterized by an open, constructive and cooperative working relationship between Zellstoff Pöls AG and Jagenberg Paper. It was not least this good cooperation that made it possible to meet all project deadlines on time in times of pandemic.

Zellstoff Pöls AG is fully satisfied with the quality of the winder.

#### “Quote project management ZPA”

The winder was specially specified for the new requirements of the Pöls production facility and designed and carried out by Jagenberg Paper. The target, set by the production management, was "maximum flexibility with the maximum possible production width at the site".

Zellstoff Pöls AG is one of the largest producers of elemental chlorine free (ECF) long fiber sulfate pulp in Central and Eastern Europe with the company headquarters in Pöls, Styria, Austria. Bleached kraft paper is produced on the integrated paper machines, making the company one of the largest producers worldwide.
